SOLUTIONS INOX

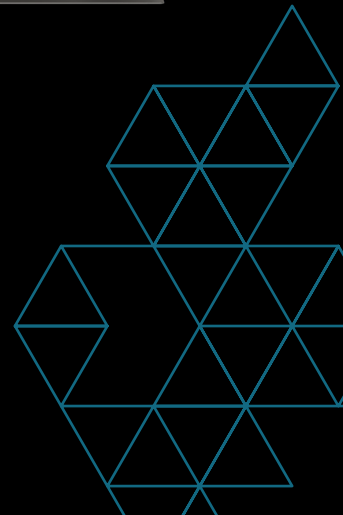

SPRAYING CUPBOARD

And its solutions' making Skid

Robert Bas develops spraying cupboard designed for the coating on cheeses, cold meats and pastries. The Skid is used for the preparation of one or two different product (s), carried out by bubbling or by mechanical mixing, then conveyed via a double pipe. The nozzles allow a homogeneous deposition on the product. The air used for the vaporization is a filtered food compressed air thanks to a prefilter, a submicrofilter and an active carbon filter. The control center automatically manages entire process : filling, mixing, spraying and cleaning. This equipment meets the standards requirement in the food industry.
